Two Postdoctoral Positions

Project: **Building and Testing Normative Models of Natural Behavior**
Advertisement No. **IP/10358/Advt0278**

How do minds **perceive**, **plan**, and **learn** in an uncertain, **changing** world — with **limited time and energy**? Join us in building and testing normative models of natural behavior using the **Resource-rational Context-dependent POMDP (RCP)** framework.

WHAT YOU WILL DO

- Design visual, multisensory, and motor-learning experiments using psychophysics, VR, eye tracking, and robotic interfaces.
- Develop behavioral paradigms probing perception, learning, planning, decision making, and contextual inference.
- Build computational models based on Bayesian inference, reinforcement learning, and probabilistic modeling.
- Publish in peer-reviewed venues, contribute to grant proposals, and build reproducible experimental & modeling pipelines.

Depending on your interests, the position may emphasize experimental neuroscience, computational modeling, or both.

WHO SHOULD APPLY

- Ph.D. in Neuroscience, Cognitive Science, Psychology, Computer Science, Robotics, AI, Mathematics, or a related field (thesis-submitted candidates are encouraged to apply).
- Expertise in one or more of: human psychophysics; computational & cognitive neuroscience; reinforcement learning, Bayesian modeling, or probabilistic inference; VR-based experiments.
- Strong programming skills (Python and/or MATLAB), quantitative data analysis, and statistical modeling.
- A good publication record and strong communication skills.

POSITIONS	SALARY / MONTH	DURATION	APPLY BY
2	**INR 72,000–84,000**	**1 year**	**10 Aug 2026**
Postdoctoral Scholar	HRA as per Institute norms	Extendable on satisfactory performance	Online applications only
